

Organization: *Nata*, a bakery that opened recently on campus. Used a simplified model/the assumption that each order has a drink and a Nata.

Nata

Nata_ID	Amount	Price
101	1	\$4.50
102	2	\$8
106	6	\$21

Made the Nata_ID for 6 Nata be 106 for the possibility that they'll sell quantities between 2-6 in the future

Type of Nata Amount

Drinks

Drink_ID	Name	Temperature	Price
201	Cinnamon Cortado	Hot	\$5.50
202	Lavender Latte	Hot	\$6
203	Chai Cold Brew	Iced	\$6
204	Matcha Lemonade	Iced	\$4

Unique Drink ID

Orders

Order_ID	Pastry_ID	Drink_ID	Price
1	101	201	\$10
2	106	201	\$26.50
3	102	204	\$14
